

17 January 2024

Jeffrey,

You don't know me, but I sit on the Panda exec with Nick Hudson. I also co-chair the UK-based [HART](#) group with Dr Clare Craig.

The work that the Brownstone Institute has been doing is quite remarkable, going places where others fear to tread.

There is – however – one area you haven't really ventured into: the question of to what extent there REALLY was a novel disease entity called "covid", a novel virus, or indeed a pandemic at all.

In this regard, many consider the word of doctors like Pierre Kory and Peter McCullough to be gospel.

To put in bluntly, several of us – myself, Jessica Hocket (who you know) and Prof Martin Neil - think they suffer from extreme observation and confirmation bias, and we have been challenging many of their core assumptions.

I ask you to please read and digest these 3 articles:

Our original critique of "spikeopathy" here:

<https://wherearethenumbers.substack.com/p/a-closer-look-at-spikeopathy-as-the>

Kory's response here:

<https://pierrekorymedicalmusings.com/p/debate-was-covid-19-a-pandemic-caused>

Our response to Kory's response:

<https://wherearethenumbers.substack.com/p/our-response-to-dr-pierre-kory>

There are substantial holes in the entire pandemic narrative. We believe that for a variety of reasons many with a vested interest – whether that be prestige, reputation or money – are hugely disincentivized from examining the events in 2020 critically, and are therefore either wittingly or unwittingly playing a role in maintaining an illusion.

This illusion is dangerous as it seems to have validated a simple recipe that the medical-industrial complex can repeat any time it chooses. Indeed, they currently talk of little else other than "the next pandemic" – something which should terrify us all, but not because of any putative virus.

We would like you to consider writing a very short piece making people aware that this debate is actually happening, including making reference to the 3 articles. We think people are totally ignorant that the question marks we raise even exist.

Kind regards

Jonathan Engler
